Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to an apparatus for indexing a length of film for severance, Classified in class 83, subclass 206.
 - II. Claims 13-20, drawn to a method for indexing a length of film for severance at a severance position, classified in class 83, subclass 13.

The inventions are distinct, each from the other because:

- a. Inventions II and I are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case (1) applies because the process as claimed can be practiced by another materially different apparatus that does not have a film holder between the liner feeding device and the trimming device. A clamping device could hold the film without closing the gap. In fact, clamping mechanism for clamping the gap and the closing mechanism for the gap could be separated mechanisms. In addition, the apparatus as claimed can be used to practice another and materially different process such as the process of embossing sheet materials or films rather than trimming sheet materials or films. The linear feeding device can direct the sheet material or the film into an embossing device rather than a trimming device.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction

Art Unit: 3724

for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
